

# Rockchip RK312X Linux SDK Release Note

---

ID: RK-FB-YF-376

Release Version: V1.3.0

Release Date: 2022-06-08

Security Level: ☐Top-Secret ☐Secret ☐Internal ☒Public

## DISCLAIMER

Customer service Tel: +86-4007-700-590

Customer service Fax: +86-591-83951833

Customer service e-Mail: [fae@rock-chips.com](mailto:fae@rock-chips.com)

## Preface

## Overview

The document presents Rockchip RK312X Linux SDK release notes, aiming to help engineers get started with RK312X Linux SDK development and debugging faster.

## Intended Audience

This document (this guide) is mainly intended for:

Technical support engineers

Software development engineers

## Chipset and System Support

Chipset	Buildroot	Debian
RK3126C、RK3128	Y	Y

## Revision History

日期	版本	作者	修改说明
2019-04-29	BETA V0.1	Owen Chen	Beta version
2019-07-19	V1.0.0	Hans Yang	Release V1.0.0 version
2020-08-06	V1.2.0	Hans Yang	Release V1.2.0 version
2022-06-08	V1.3.0	Hans Yang	Release V1.3.0 version

## Contents

### Rockchip RK312X Linux SDK Release Note

1. Overview
2. Main Functions
3. How to Get the SDK
  - 3.1 Get General RK312X Linux SDK
    - 3.1.1 Get Source Code from Rockchip Code Server
    - 3.1.2 Get Source Code from Local Compression Package
4. Software Development Guide
5. Hardware Development Guide
6. SSH Public Key Operation Introduction
  - 6.1 Multiple Machines Use the Same SSH Public Key
  - 6.2 One Machine Switches Different SSH Public Keys
  - 6.3 Key Authority Management
  - 6.4 Reference Documents

# 1. Overview

---

This SDK is based on Debian 11 and Buildroot 2018.02-rc3, with kernel 4.4 and U-boot v2017.09. It is suitable for RK3126C/RK3128 EVB development boards and all other Linux products developed based on it.

This SDK is suitable for, but not limited to, AIoT products such as Electronic photo frame, intelligent panel, industrial control panel, intelligent gateway, providing flexible data path combination interfaces to meet the customized requirements for free combination, please refer to the documents under the project's docs/ directory.

## 2. Main Functions

---

Function	Module Name
System	Debian, Buildroot
Partition table	uboot, misc, boot, recovery, rootfs, oem, userdata
File System Type	EXT2/3/4, VFAT, NTFS, UBIFS, SquashFS
Upgrade Recovery	OTA, Recovery
Secure Boot	SecureBoot
Stress Test Tool	ROCKCHIP_TEST
Data communication	Wi-Fi, Ethernet card, USB, SD card, SATA, PCI-e interface
Applications	Multimedia playback, camera preview, settings, browser, file management

## 3. How to Get the SDK

---

The SDK is released by Rockchip server. Please refer to Chapter 4 [Software Development Guide](#) to build a development environment.

### 3.1 Get General RK312X Linux SDK

#### 3.1.1 Get Source Code from Rockchip Code Server

To get RK312X Linux SDK software package, customers need an account to access the source code repository provided by Rockchip. In order to be able to obtain code synchronization, please provide SSH public key for server authentication and authorization when apply for SDK from Rockchip technical window. About Rockchip server SSH public key authorization, please refer to Chapter 6 [SSH Public Key Operation Introduction](#).

RK312X\_Linux\_SDK download command is as follows:

```
repo init --repo-url ssh://git@www.rockchip.com.cn/repo/rk/tools/repo -u \  
ssh://git@www.rockchip.com.cn/linux/rockchip/platform/manifests -b linux -m \  
rk312x_linux_release.xml
```

Repo, a tool built on Python script by Google to help manage git repositories, is mainly used to download and manage software repository of projects. The download address is as follows:

```
git clone ssh://git@www.rockchip.com.cn/repo/rk/tools/repo
```

### 3.1.2 Get Source Code from Local Compression Package

For quick access to SDK source code, Rockchip Technical Window usually provides corresponding version of SDK initial compression package. In this way, developers can get SDK source code through decompressing the initial compression package, which is the same as the one downloaded by repo. Take RK312X\_LINUX\_SDK\_RELEASE\_V1.3.0\_20220608.tgz as an example. After getting a initialization package, you can get source code by running the following command:

```
mkdir rk312x  
tar xvf RK312X_LINUX_SDK_RELEASE_V1.3.0_20220608.tgz -C rk312x  
cd rk312x  
.repo/repo/repo sync -l  
.repo/repo/repo sync -c
```

Developers can update via `.repo/repo/repo sync -c` command according to update introductions that are regularly released by FAE window.

## 4. Software Development Guide

---

For software development, please refer to the quick start documents in the project directory:

```
<SDK>/docs/RK3588/Quick-start/Rockchip_RK312X_Quick_Start_Linux_CN.pdf
```

## 5. Hardware Development Guide

---

For hardware development, please refer to the user guide document in the project directory:

```
<SDK>/docs/Socs/RK312X/Rockchip_RK3126C_Hardware_Design_Guide_V1.0_CN.pdf  
<SDK>/docs/Socs/RK312X/Rockchip_RK3128_Hardware_Design_Guide_V0.1_CN.pdf
```

## 6. SSH Public Key Operation Introduction

Please follow the introduction in the “Rockchip\_User\_Guide\_SDK\_Application\_And\_Synchronization\_CN” to generate an SSH public key and send the email to [fae@rock-chips.com](mailto:fae@rock-chips.com), to get the SDK code. This document will be released to customers during the process of applying for permission.

### 6.1 Multiple Machines Use the Same SSH Public Key

If the same SSH public key should be used in different machines, you can copy the SSH private key file `id_rsa` to “`~/.ssh/id_rsa`” of the machine you want to use.

The following prompt will appear when using a wrong private key, please be careful to replace it with the correct private key.

```
~/tmp$ git clone git@172.16.10.211:rk292x/mid/4.1.1_r1  
Initialized empty Git repository in /home/cody/tmp/4.1.1_r1/.git/  
The authenticity of host '172.16.10.211 (172.16.10.211)' can't be established.  
RSA key fingerprint is fe:36:dd:30:bb:83:73:e1:0b:df:90:e2:73:e4:61:46.  
Are you sure you want to continue connecting (yes/no)? yes  
Warning: Permanently added '172.16.10.211' (RSA) to the list of known hosts.  
git@172.16.10.211's password: █
```

After adding the correct private key, you can use git to clone code, as shown below.

```
~$ cd tmp/  
~/tmp$ git clone git@172.16.10.211:rk292x/mid/4.1.1_r1  
Initialized empty Git repository in /home/cody/tmp/4.1.1_r1/.git/  
The authenticity of host '172.16.10.211 (172.16.10.211)' can't be established.  
RSA key fingerprint is fe:36:dd:30:bb:83:73:e1:0b:df:90:e2:73:e4:61:46.  
Are you sure you want to continue connecting (yes/no)? yes  
Warning: Permanently added '172.16.10.211' (RSA) to the list of known hosts.  
remote: Counting objects: 237923, done.  
remote: Compressing objects: 100% (168382/168382), done.  
Receiving objects: 9% (21570/237923), 61.52 MiB | 11.14 MiB/s
```

Adding ssh private key may result in the following error.

Agent admitted failure to sign using the key

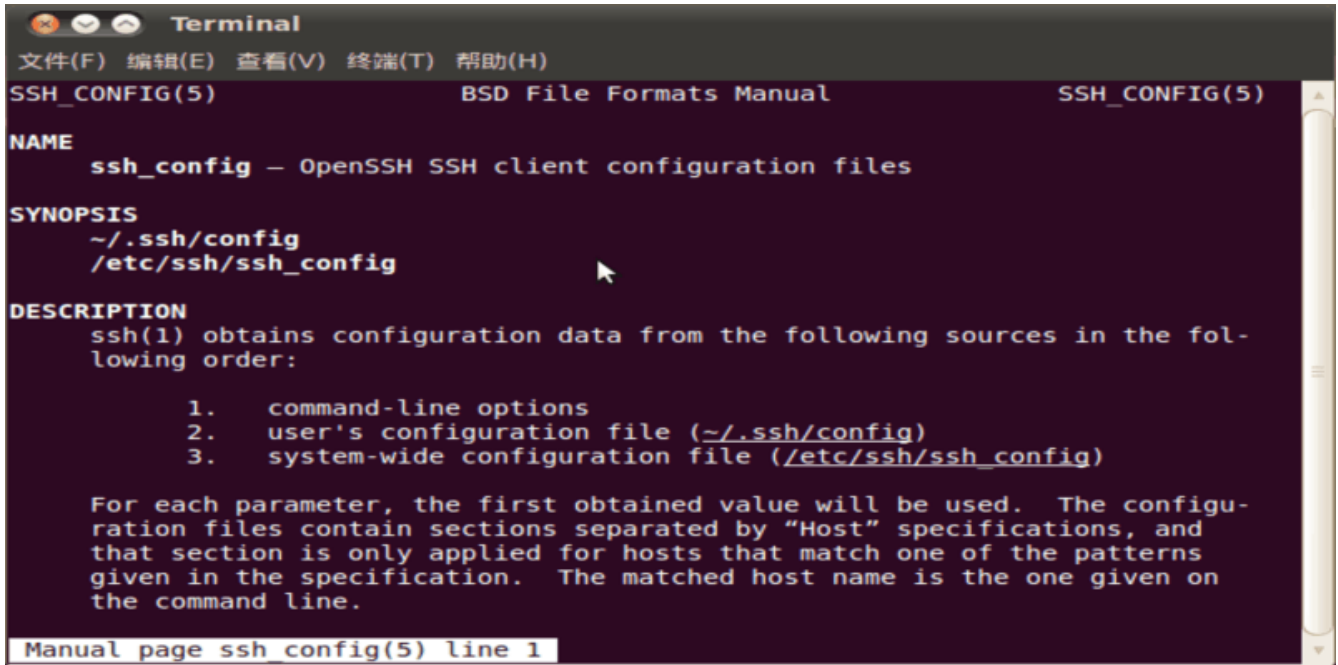

Enter the following command in console to solve:

```
```shell  
ssh-add ~/.ssh/id_rsa
```

### 6.2 One Machine Switches Different SSH Public Keys

You can configure SSH by referring to `ssh_config` documentation.

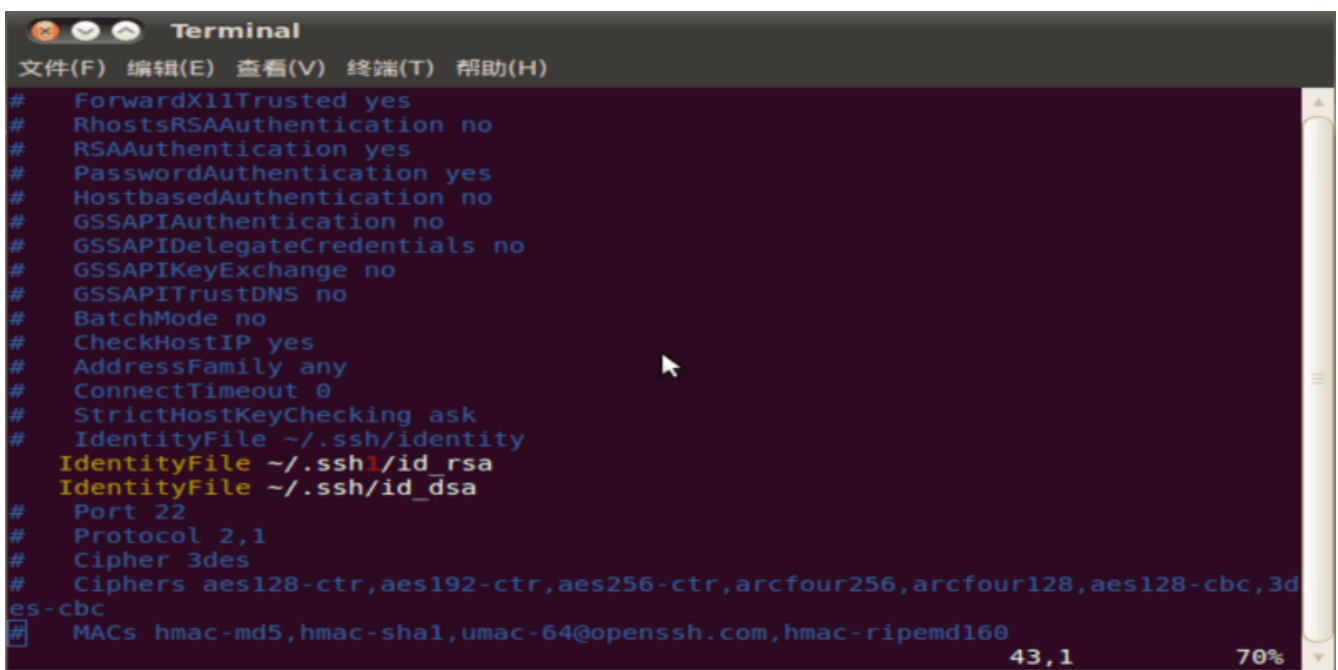

```
~$ man ssh_config
```

Run the following command to configure SSH configuration of current user.

```
~$ cp /etc/ssh/ssh_config ~/.ssh/config
~$ vi ~/.ssh/config
```

As shown in the figure, SSH uses the file “`~/.ssh1/id_rsa`” of another directory as an authentication private key. In this way, different keys can be switched.

## 6.3 Key Authority Management

Server can monitor download times and IP information of a key in real time. If an abnormality is found, download permission of the corresponding key will be disabled.

Keep the private key file properly. Do not grant second authorization to third parties.

## **6.4 Reference Documents**

For more details, please refer to document

"/docs/Others/Rockchip\_User\_Guide\_SDK\_Application\_And\_Synchronization\_CN.pdf"
